

ADULT VACCINATION RADIO – Uncomfortable Cough

1 x 30-Second.

We hear a recording of a distressed young child or baby with a hacking, grating cough.

The coughing continues under the voice over and may occasionally interrupt it.

VOICE OVER: **Adults can catch Whooping Cough.
They can also catch a range of preventable diseases like Measles and
of course, the flu.
Worse still, they can pass them on to children.**

**Talk to an immunisation provider today.
Because, if it makes you uncomfortable listening to this, imagine
how bad you'd feel knowing it was you who gave it to them.**

VOICE OVER: **Immunisation.
Spread the word, not the disease.**

Search, immunisation hub to find out more.
