

NISSAN DUALIS: It's Hard to Picture it- HIT

V/O: It's directly behind you. It's just about to make contact. Over seven metres tall, it has an illuminating distance of 14 metres. Formed from galvanized tubular steel, it withstands a maximum gust speed of 157.72 kilometers per hour. The concrete foundation renders it a permanent fixture.

V/O 2: *It's hard to picture it when you can't see it.* That's why the Nissan DUALIS Ti-L has 4 cameras and a 360° Around View Monitor. So that lamppost you're about to back into? You'll see it.
